# MagCo Plus™

MagCo Plus™ is an animal and poultry supplement that enhances the digestive system and improves feed efficiency significantly.

Starting with seawater MagCo Plus™ is concentrated with a specific and unique process that removes most of the sodium and yet retains all the beneficial organic compounds that are naturally in the ocean water.

MagCo Plus also contains enzymes, enzyme cofactors and many micronutrients that are critical for microbial function in the digestive system.

All studies on MagCo Plus™ have shown improvement on the health and production of poultry being treated. A trial with 250,000 broiler chicks showed the following improvements.

- **Mortality reduction:**

In all cases there has been a reduction of mortality in the treated populations as compared to the control groups. Mortality during the vulnerable first two weeks of life has been reduced as much as 90%. Overall average improvement of mortality figures for the entire six week growing cycle has been between 5% to 15%.

- **Weight gain:**

In most tests there has been increased weight gain in the treated animals averaging between 3% to 10%.

- **Feed conversion efficiency:**

In all cases there has been an improvement in feed to meat conversion efficiency as compared to the controls. The range of improvement has been between 3% to 13%.

**I was losing money on my flock of 2,000 layers!!** I was only getting 300 eggs per day and very discouraged when Craig Dow of AEA recommended to add a small amount of MagCo Plus™ to the chicken's water. 2 days later production had increased by more than double and today, a couple weeks later, I am profitable again, thanks to MagCo Plus™. Abe Schwartz Michigan

**We were able to hold the "top growers position" 5 out of 8 flocks** in our co-op since we started feeding MagCo Plus™ to our broilers. 2 out of the 3 times we weren't was due to fan failure and heat stress. Don't tell anybody in our co-op about this.

An anonymous grower on the top...
